

Cylindrical Ultrasonic Sensors

UTR Series

PRODUCT MANUAL

For your safety, read and follow the considerations written in the instruction manual, other manuals and Autonics website.

The specifications, dimensions, etc. are subject to change without notice for product improvement. Some models may be discontinued without notice.

Safety Considerations

- Observe all 'Safety Considerations' for safe and proper operation to avoid hazards.
- ⚠ symbol indicates caution due to special circumstances in which hazards may occur.

⚠ Warning Failure to follow instructions may result in serious injury or death.

- 01. Fail-safe device must be installed when using the unit with machinery that may cause serious injury or substantial economic loss. (e.g. nuclear power control, medical equipment, ships, vehicles, railways, aircraft, combustion apparatus, safety equipment, crime/disaster prevention devices, etc.)**
Failure to follow this instruction may result in personal injury, economic loss or fire.
- 02. Do not use or store the unit in the place where flammable/explosive/corrosive gas, high humidity, direct sunlight, radiant heat, vibration, impact, salinity, moisture, or steam, or dust may be present.**
Failure to follow this instruction may result in explosion or fire.
- 03. Do not disassemble or modify the unit.**
Failure to follow this instruction may result in fire.
- 04. Do not connect, repair, inspect, or replace the unit while connected to a power source.**
Failure to follow this instruction may result in fire.
- 05. Check 'Connections' before wiring.**
Failure to follow this instruction may result in fire.
- 06. Qualified personnel shall carry out installation, configuration.**
Responsible person for use is an operator who:
- is fully knowledgeable about the installation, settings, use and maintenance of the product.
Failure to follow this instruction may cause malfunction or result in accident.

⚠ Caution Failure to follow instructions may result in injury or product damage.

- 01. Use the product within the rated specifications.**
Failure to follow this instruction may result in fire or product damage.
- 02. Depending on the temperature and humidity of the air, atmospheric pressure, or wind, the sound speed may be changed and it affects detection performance.**
Use the product within the rated specifications.
- 03. At high temperatures, ensure that relative air humidity does not exceed 50%RH.**
Sensing performance may deteriorate in humid environments.
- 04. Use a dry cloth to clean the unit, and do not use water or organic solvent.**
Failure to follow this instruction may result in fire.
- 05. Do not allow dust to be on the surface of the sensing surface or build up a thick layer of dust.**
Failure to follow this instruction may result in product damage and malfunction.
- 06. Keep the product away from metal chip, dust, and wire residue which might flow into the unit.**
Failure to follow this instruction may result in fire or product damage.
- 07. Do not connect the load if power is supplied only to UT-P (sold separately, ultrasonic sensor programming unit).**
Failure to follow this instruction may result in fire or product damage.
- 08. In case of IO-Link models, IO-Link and UT-P communications cannot be used simultaneously.**
Do not connect wiring arbitrarily.

Cautions during Use

- Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
- The 12 - 30 VDC power input is insulated and limited voltage/current or use SELV, Class 2 power supply.
- Use the product, after about 30 min of supplying power. Temperature compensation stabilizes the sensor. If sensor stabilization is not completed, sensing performance deteriorate or an error occurs when setting parameters.
- The filtered distance may not be immediately reflected due to EMC interference.
- Wire as short as possible and keep away from high voltage lines or power lines, to prevent surge and inductive noise. Do not use near the equipment which generates strong magnetic force or high frequency noise (transceiver, etc.).
In case installing the product near the equipment which generates strong surge (motor, welding machine, etc.), use diode or varistor to remove surge.
- This unit may be used in the following environments.
 - Indoors (UL Type 1 Enclosure)
 - Altitude max. 2,000 m
 - Pollution degree 3
 - Installation Category II

Cautions for Installation

■ Environment

- Install the unit correctly with the usage environment, location, and the designated specifications.
- When power is applied, vibration and sound occur by sound waves at the front part of the sensor.
- Install the sensor and the sensing target at right angles.
- It cannot be used in a vacuum without a medium.
- If there is an object nearby that absorbs sound strongly or diffuses, sensing performance may deteriorate.
- Install no objects other than the sensing target in the detection width area.
- For the detection width area, refer to the product manual.
- When changing the sensor settings, test the sensor before use. Check whether the indicator light operates correctly according to the detection range and filter or other settings change.

■ Wire

- The waterproof function may be damaged if the product is subjected to impact from a hard object or bent excessively or repeatedly.
- In case of IO-Link mode, the cable length between the unit and the IO-Link Master should be under 20 m.

■ Installation

• Distance

When plural ultrasonic sensors are mounted in a close row, malfunction of sensor may be caused due to mutual interference.

Therefore, be sure to provide a minimum distance between the two sensors, as below table.

Type	Model	UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
A		2,500 mm	2,500 mm	4,000 mm	30,000 mm
B		350 mm	400 mm	700 mm	4,000 mm

• Tightening torque

Use the provided washer to tighten the nuts.

The tightening torque of the nut varies with the distance from the fore-end. [Figure 1]
If the nut tip is located at the front of the product, apply the front tightening torque.
The allowable tightening torque table is for inserting the washer as [Figure 2]

Model	UTRCM18	UTRCM30
Strength		
Front size	13 mm	
Front torque	9.81 N m	15 N m
Rear torque	15 N m	

Ordering Information

This is only for reference, the actual product does not support all combinations.
For selecting the specified model, follow the Autonics website.

IL2: IO-Link COM2

Software

Download the installation file and the manuals from the Autonics Website.

■ atDistance

It is the monitoring data management program for installation of the ultrasonic sensor, parameter setting, and status information. When required, connect the ultrasonic sensor programming unit UT-P Series (sold separately)

■ atIOLink

atIOLink with purposes for setting, diagnosis, and maintenance of IO-Link device via IODD file is provided as the Port and Device Configuration Tool (PDCT).

Product Components

- Product × 1
- Instruction Manual × 1
- Nut × 2
- Washer × 1

Sold Separately

- Ultrasonic sensor programming unit : UT-P Series
- M12 connector cable: CID5-□, C1D5-□

Dimensions

- Unit: mm, For the detailed, follow the Autonics website.

A	Transducer (sensing side)	B	Operation Indicator	C	Display part
---	---------------------------	---	---------------------	---	--------------

■ UTRCM18

- UTRCM18-350 / 600
- UTRCM18-1300

■ UTRCM30

- UTRCM30-8MDB-D-□: The dimension depends on the display part.

Connector Specification

- For LOAD connection, follow the cable type connection.
- Fasten the connector along the thread. (tightening torque: 0.39 to 0.49 N m)
- Fasten the vibration part with PTFE tape.

Pin no.	Color	Function
①	Brown	VCC 12 - 30 VDC≡
②	White	I/V Analog output
③	Blue	GND 0 V
④	Black	C/Q Digital output / IO-Link
⑤	Yellow	COM Multifunctional input

Connections

- This is the connection diagram when using the SIO mode. The control output mode can be selected through load connection.
- Since the digital output is based on the PNP type, the operation status may be reversed when wired for NPN.

① Brown	② White	③ Blue	④ Black	⑤ Yellow
VCC	I/V (analog output)	GND	C/Q (digital output)	COM

■ SIO mode

• NPN

• PNP

Unit Descriptions

- It is for the display part supporting models.
- In case of the non-display part models, it is possible to set the parameter in the ultrasonic sensor programming unit UT-P Series (sold separately) or in the ultrasonic sensor software atDistance.

01. Display part (3-digit)

Displays present value and parameter setting value

cm	mm	%
100	100	100
100 cm	100 mm	100 %

02. [T1], [T2] key

Parameter selection, moving digit of the setting value or changing the setting value

Direct Setting

- Some parameters are activated / deactivated depending on the model or setting of other parameters.
- [T1] + [T2] keys: Select the parameter.
 - [T1] key: Transfers the previous parameter and digit of the setting value.
 - [T2] key: Transfers the next parameter and change the setting value.
- Bold** specifications for each parameter setting range are factory default.

■ Digital output

Output method	Slide display	<i>d i r S E t</i>
	Setting range	D: digital output , IV: analog output

Operation mode	Slide display	<i>ñ o d E S E L E C t</i>
	Setting range	ARE: Area , WIN: Window, 1-P: One-Point

Switching point 1 The setting range varies depending on the model and operation mode setting, and may be limited depending on parameter settings.

Setting range	Slide display	<i>S P 1</i>			
		UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
	ARE	30 to 250 to 349 [mm]	65 to 350 to 599 [mm]	120 to 1000 to 1299 [mm]	600 to 6000 to 7999 [mm]
	WIN	31 to 253 to 349 [mm]	66 to 355 to 599 [mm]	121 to 1000 to 1299 [mm]	601 to 6000 to 7999 [mm]
	1-P	31 to 125 to 343 [mm]	67 to 175 to 588 [mm]	123 to 500 to 1274 [mm]	613 to 3000 to 7843 [mm]

Switching point 2 The setting range varies depending on the model and operation mode setting, and may be limited depending on parameter settings.

Setting range	Slide display	<i>S P 2</i>			
		UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
	WIN	31 to 277 to 349 [mm]	66 to 395 to 599 [mm]	121 to 1200 to 1299 [mm]	601 to 7900 to 7999 [mm]

Output mode (N.O. / N.C.)	Slide display	<i>n o n C</i>
	Setting range	NO: Normally Open NC: Normally Closed

■ Analog output

Output method	In case of analog output unsupported models, an error may occur during setting.	
	Slide display	<i>d i r S E t</i>
	Setting range	D: digital output , IV: analog output

Setting range	Slide display	<i>n E A r L i ñ i t</i>			
		UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
		30 to 349 [mm]	65 to 599 [mm]	120 to 1299 [mm]	600 to 7999 [mm]

Setting range	Slide display	<i>F A r L i ñ i t</i>			
		UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
		31 to 350 [mm]	66 to 600 [mm]	121 to 1300 [mm]	601 to 8000 [mm]

Output mode (rising / falling)	Slide display	<i>C H A r A C t E r i S e t C S</i>
	Setting range	- - - : Rising (0 → 100 %) - - - : Falling (100 → 0 %)

Add-On

- Some parameters are activated / deactivated depending on the model or setting of other parameters.
- [T1] + [T2] keys: Select the parameter.
 - [T1] key: Transfers the previous parameter and digit of the setting value.
 - [T2] key: Transfers the next parameter and change the setting value.
- Bold** specifications for each parameter setting range are factory default.

Display part light	The setting value is applied only for display part supporting models.	
	Display	<i>d 0 1</i>
	Slide display	<i>L i G H t L E v E L</i>
	Setting range	STD: lightness , DRK: darkness, OFF: turn-off

Display part direction	The setting value is applied only for display part supporting models.	
	Display	<i>d 0 2</i>
	Slide display	<i>d i S P L A Y I n v E r t</i>
	Setting range	NOR: forward direction , INV: half-turn

Display part unit	The setting value is applied only for display part supporting models.	
	Display	<i>d 0 3</i>
	Slide display	<i>d i S P L A Y U n i t</i>
	Setting range	- - - : distance display - - - : 100 → 0 % display - - - : 0 → 100 % display

Analog output type	The setting value is applied only for digital + analog output models.	
	Display	<i>d 0 4</i>
	Slide display	<i>A n A L o G o U t P U t t Y P E</i>
	Setting range	V: voltage output, I: current output

Digital output hysteresis

The setting range varies depending on the model and operation mode setting, and may be limited depending on parameter settings.

Display	d05				
Slide display	Hysteresis				
Setting range		UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
	ARE	1 to 3 to 320 [mm]	1 to 5 to 535 [mm]	1 to 20 to 1180 mm	1 to 100 to 7400 mm
	WIN	1 to 3 to 160 [mm]	1 to 5 to 267 [mm]	1 to 20 to 590 mm	1 to 100 to 3700 mm
	1-P	1 to 3 to 157 [mm]	1 to 5 to 261 [mm]	1 to 20 to 576 mm	1 to 100 to 3614 mm

Measurement filter

Display	d06
Slide display	Filter type
Setting range	F00: no filter F01: foreground filter F02: averaging filter F03: foreground + averaging filter F04: background + averaging filter

Measurement filter strength

Display	d07
Slide display	Filter strength
Setting range	P00 to P09: weak to strong

Timer mode

Display	d08
Slide display	Delay
Setting range	---: OFF ON: On-delay OFF: Off-delay ONE: One-shot delay

Timer delay time

Display	d09
Slide display	Delay value
Setting range	001 to 025 [sec]

Foreground suppression

Sets the detection start position.

The setting range varies depending on the model and operation mode setting, and may be limited depending on parameter settings.

Display	d10			
Slide display	Foreground suppression			
Setting range	UTRCM18-350	UTRCM18-600	UTRCM18-1300	UTRCM30-8M
	30 to 90 [mm]	65 to 195 [mm]	120 to 360 [mm]	600 to 1800 [mm]

Temperature manual compensation

Place a sensing target before the temperature compensation.

Temperature compensation before the temperature stabilization (for over 30 min after supplying power) may cause occur an error.

Display	d11
Slide display	Temperature compensation
Setting range	≤ ± 10 % of setting location

Detection width

The setting value is applied only for UTRCM18-1300, UTRCM30-8M models.

Display	d12
Slide display	Sensing width
Setting range	WID: wide , MID: middle, NAR: narrow

Max. address value of multiplex

Set higher than the multiplex address.

Display	d13
Slide display	Multi address
Setting range	01 to 10

Synchronization mode

In case of the IO-Link synchronization, you can only set on IO-Link models.

Display	d14
Slide display	Synchronization mode
Setting range	00: synchronization 01 to 10: multiplex address 11: IO-Link synchronization

Quick

- The setting method depends on the output method. With the setting in order, the setting value is saved and returned to RUN mode.
- It is possible to set to the input key or M12 connector cable (sold separately) connection. For more information, refer to the 'Wire Setting'.
- When pressing and releasing the [T1], and [T2] keys for 12 sec on each parameter, the existing settings are ignored and the CAN is displayed before returning to RUN mode.

Digital output teaching

No	Display	Operation
1	SP1 teaching	RUN mode Place the sensing target on the switching point1 (SP1) position.
		Press the [T1] key for 3 sec. Release the [T1] key to complete the SP1 teaching.
2	Select the operation mode	Press and release the [T1] key for 3 sec.
		Press and release the [T1] key for 5 sec.
		Place the sensing target on the window switching point2 (SP2) position.
		Press and release the [T1] key for 7 sec. Release the [T1] key to complete the SP2.
3	N.O. / N.C.	Normally open Press and release the [T1] key for 3 sec to return to the RUN mode.
		Normally closed Press and release the [T2] key for 3 sec to return to the RUN mode.

01) When pressing the [T1] key in the RUN mode for 7 seconds, the same parameter is displayed and can be set independently.

Analog output teaching

- In case of analog output unsupported models, an error may occur during setting.

No	Display	Operation
1	Analog output	RUN mode Place the sensing target on the near point (AT1) position.
		Press the [T2] key for 3 sec.
		Release the [T2] key to complete the AT1 teaching.
		Place the sensing target on the far point (AT2) position.
2	Analog output mode	Press the [T2] key for 3 sec.
		Release the [T2] key to complete the AT2 teaching.
		- - : Rising (0 → 100 %), Press and release the [T1] key for 3 sec to return to the RUN mode.
		- - : Falling (100 → 0 %), Press and release the [T2] key for 3 sec to return to the RUN mode.

01) When pressing the [T2] key in the RUN mode for 7 seconds, the same parameter is displayed and can be set independently.

Temperature Compensation (Auto)

- Use this function after the temperature stabilization (for over 30 min after power supply).

Display	Setting operation
RUN mode	Press the [T1] key for 13 sec.
Release the key	
YES: Activate the automatic calibration of the detection value	
Press and release the [T1] key for 3 sec to return to the RUN mode.	

Digital Output: Operation Mode

Area

Determine a switching point1 (SP1) to set the detection area.

SP1 setting	Foreground suppression ≤ SP1 ≤ Max. setting zone - Hysteresis
Hysteresis	1 ≤ Hysteresis ≤ Max. setting zone - SP1
Foreground suppression	Foreground suppression ≤ SP1

- Normally Open (N.O.)

- Normally Closed (N.C.)

Window

Determine a switching point1 (SP1) and a switching point2 (SP2) to set the detection area.

SP1 setting	Foreground suppression + Near hysteresis ≤ SP1 ≤ SP2
SP2 setting	SP1 ≤ SP2 ≤ Max. setting zone - Far hysteresis
Near hysteresis	1 ≤ Near hysteresis ≤ SP1 - Foreground suppression
Far hysteresis	1 ≤ Far hysteresis ≤ Max. setting zone - SP2
Foreground suppression	Foreground suppression ≤ SP1 - Near hysteresis

- Normally Open (N.O.)

- Normally Closed (N.C.)

■ One-point

Determine automatically the near and far switching points depending on the switching point1 (SP1) and the offset ratio to set the detection area.

SP1 setting	Foreground suppression + Offset + Near hysteresis $\leq$ SP1 $\leq$ Max. setting zone - Offset - Far hysteresis
Offset ratio⁰¹⁾	8 % (atDistance setting: 2 to 20 %)
Near hysteresis	$1 \leq$ Near hysteresis $\leq$ SP1 - Offset - Foreground suppression
Far hysteresis	$1 \leq$ Far hysteresis $\leq$ Max. setting zone - SP1 - Offset
Foreground suppression	Foreground suppression $\leq$ SP1 - Offset - Near hysteresis

01) Offset = SP1 $\times$ Offset ratio

- Normally Open (N.O.)

- Normally Closed (N.C.)

Analog Output: Output Mode

Rising mode is to increase the analog output value as the sensing distance increases. Falling mode is to decrease the analog output value as the sensing distance increases. If the sensing target is in the area between the near and far points, the operation indicator (green) turns on.

Near point	Foreground suppression $\leq$ Near point $\leq$ Far point
Far point	Near point $\leq$ Far point $\leq$ Max. setting zone
Foreground suppression	Foreground suppression $\leq$ Near point

■ Rising

- Analog output increases when sensing distance increases.

■ Falling

- Analog output decreases when sensing distance increases.

Timer

- Setting range: 1 to 25 sec, set at 1 sec intervals
- T: Timer time

Measurement Filter and Strength

■ Measurement filter

Set the measurement filter (F00 to F04) to change the response time on the sensor's measurements or filter the values with a stable curve.

---	Unfiltered
—	Filtered

F00: No filter

- Measurements with no filter

F01: Foreground filter

- If a distance is measured greater than the distance currently measured by the sensor, this filter maintains the existing value for a certain period of time and then outputs measured values with a delay.
- If the detection time is shorter than the delay time, the measurement value is not be output.
- The higher the measurement filter strength, the longer the delay time for the increasing distance.

F02: Averaging filter

- If the measured values are unstable due to vibration etc., this filter outputs the values with a curve.
- If the measurement filter strength is higher, the measurements are filtered with a more stable curve.

F03: Foreground + averaging filter

- If a distance is measured greater than the distance currently measured by the sensor [Figure 1], this filter outputs simultaneously applied to measured values with delay and curve. (Foreground + Averaging filter)
- If a distance is measured closer than the distance currently measured by the sensor, this filter outputs applied to measured values with curve. (Average filter)
- If the detection time is shorter than the delay time, the measurement value is not be output.
- The higher the measurement filter strength, the longer the delay time for the increasing distance, and the more stable the measurements are filtered.

F04: Background + averaging filter

- If a distance is measured greater than the distance currently measured by the sensor, this filter outputs applied to measured values with curve. (Average filter)
- If a distance is measured closer than the distance currently measured by the sensor, this filter outputs simultaneously applied to measured values with delay and curve. (Background + Averaging filter)
- If a distance is measured closer than the distance currently measured by the sensor, the background filter maintains the existing value for a certain period of time and then outputs the measured value with a delay.
- If the detection time is shorter than the delay time, the measurement value is not be output.
- The higher the measurement filter strength, the longer the delay time for the decreasing distance, and the more stable the measurements are filtered.

■ Filter strength

The higher the filter strength, the longer the sensor output delay time, or filter with a more stable curve. The measurement filter can be set to the intensity in steps 0 to 9. (P00 (weak) to P09 (strong))

Temperature Compensation (Auto / Manual)

- Select Auto or Manual temperature compensation depending on models and environment to minimize the error between the actual distance and the measured value for measurement accuracy.
- If the difference between the standard or the actual distance and the measured value is less than $\pm 10\%$, the value is compensated according to the distances, and if it is more than $\pm 10\%$, the value is compensated according to the internal algorithm.
- Use after temperature stabilization (for over 30 min after power supply). An error can occur if temperature compensation is activated before temperature stabilization.

■ Auto temperature compensation

- Compensate the measured values using model standard distances. Set through the wire or the key input.
- Standard distance

UTRCM18-350 / 600	300 mm
UTRCM18-1300	600 mm
UTRCM30-8M	1200 mm

■ Manual temperature compensation

- Input the actual installation distance to compensate the measurement difference correctly.
- It is possible to set the manual temperature compensation (D11) parameter or dedicated software (atDistance) in Add-on mode.

Synchronization Mode

- When multiple ultrasonic sensors are connected with the synchronization mode, a wider detection width can be detected. Synchronization mode and multiplex mode cannot be used together.
- It can be set through Setting for Supplying Power, Add-on mode parameter settings, or the dedicated software (atDistance).
- The sensors to be used in synchronization mode must have their COM terminals connected to each other, and it instantly operates when power is applied.
- Synchronization mode cannot be used when the Ultrasonic Sensor Programming Unit (UT-P, sold separately) is connected. Even if configured via dedicated software, please disconnect the programming unit before using synchronization mode.

■ Synchronization

Ultrasonic signal connected from the synchronization is simultaneously transmitted to detect at the same time. It can detect wide areas more than the max. detection width of a product.

In the synchronization mode, the response time changes based on the longest response time among connected products.

To prevent mutual interference, install at a distance greater than the rated distance between sensors.

For detailed separation distances, refer to the Cautions for Installation.

■ Multiplex

Set the multiplex addresses differently by transmitting / receiving the ultrasonic signals in turn, it is possible to detect one or more sensing targets and monitor wide areas simultaneously.

In the multiplex function, the overall system response time may increase and differ from the rated response time.

Since no mutual interference occurs, the sensors can be installed regardless of the distance between sensors.

Term Definition

① Blind zone	Area that the sensor cannot physically detect
② Foreground suppression	Area ignored even if there is a sensing target within the setting area
③ Max. setting zone	Area that detection of the sensing target is valid

Detection Data

■ UTRCM18-350

- Sensing target size : Standard sensing target
- Detection width: Fixed
- Foreground suppression: 0 mm

■ UTRCM18-600

- Sensing target size : Standard sensing target
- Detection width: Fixed
- Foreground suppression: 0 mm

■ UTRCM18-1300

- Sensing target size : Standard sensing target
- Detection width: Wide
- Foreground suppression: 0 mm

■ UTRCM30-8M

- Sensing target size : Standard sensing target
- Detection width: Wide
- Foreground suppression: 0 mm

Parameter Index

■ Process Data

- The current data value is displayed in real time.

Parameter	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0

■ **Diagnosis menu**

- The information about problems encountered during device operation is displayed.

Index		Parameter	Description	Type	Access
hex.	dec.				
0x25	37	Detailed Device Status	Device detailed status	UInteger	RO

■ **Events**

- When the corresponding error occurs, the abnormal indicator flashes.

Index		Parameter	Description	Type
hex.	dec.			
0x1807	6151	Parameter Error	Parameter using warning	Error
0x4210	16912	Device temperature over-run	Overheating detection warning	Warning
0x8CA0	36000	Teaching error	Teaching error	Notification
0x8CA1	36001	Teaching success	Teaching success	Notification

Sold Separately: M12 Connector Cable

- For detailed information, refer to the ‘M8/M12 Connector Cable’ manual.

Appearance	Power	Connector 1	Connector 2	Length	Feature	Model
	DC	M12 (Socket-Female)	5-wire	1 m	PVC	CID5-1
				2 m		CID5-2
				3 m		CID5-3
				5 m		CID5-5
				7 m		CID5-7
	DC	M12 (Socket-Female)	M12 (Plug-Male)	1 m	PVC	C1D5-1
				2 m		C1D5-2
				3 m		C1D5-3
				5 m		C1D5-5
				7 m		C1D5-7

Segment Table

The segments displayed on the product indicate the following meanings. It may differ depending on the product.

7 segment				11 segment				12 segment				16 segment			
0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1
1	1	2	2	1	1	2	2	1	1	2	2	1	1	2	2
2	2	3	3	2	2	3	3	2	2	3	3	2	2	3	3
